Introduction to Mobile App Development With Flutter

Flutter is the popular open-source framework created by Google for developing Android and iOS apps. Introduction to Mobile App Development Course with Flutter is a free online course that helps you discover how to use Flutter effectively. We will show you how to build a complete Contacts App from scratch and how to make the most of this high-performance, intuitive framework. You will not just study Flutter in theory, but we will build a complete realistic app throughout this course.

Network Server Security - Protecting the Server and Client Computers

A firewall protects a computer or network from network-based attacks and filters data packets traversing the network. This course will first discuss network security and introduce you to the Open System Interconnection (OSI) model and the three generations of firewalls. You will then look into the function of the Network Access Protection (NAP), Intrusion Detection System (IDS), and Intrusion Prevention System (IPS).
